

Our practice now uses Clinical Note Support (AI)

- + This AI system briefly records the conversation and creates summarised notes for your health record
- + Helps your doctor or nurse **focus** fully on **you** during your consultation
- + Protects your **confidentiality** — notes are securely stored
- + Supports better and more **accurate** care, with less disruption

If you would prefer not to use the Clinical Note Support during your appointment, that's fine.

Please let reception know, and they will inform your clinician.
